

WiFi: Why Die?

Microwave Radiation and Human Reproduction

Martin G. Collins

Given 19-Jul-14; Sermon #1223c

Today, I want to talk to you about something that is a serious danger to you, your children, and your children's children. The dangers of WiFi have been debated, argued over, and scoffed at for more than two decades now. Exaggerations have been made about its safety. Fabricated and falsified scientific documents and evidence have been produced to support the favorable claims of the telecommunications industry, and lies have been told to sell the product.

According to Professor John R. Goldsmith, International Consultant for Radio-Frequency Communication, Epidemiology and Communications Sciences Advisor to the World Health Organization (WHO), "Of the microwave-exposed women, 47.7% had miscarriages prior to the 7th week of pregnancy...." This should deeply concern each and every one of us, especially those of you who have just been recently married or will be married soon.

That's almost half of all women who were studied for exposure to WiFi and microwaves had miscarriages early in their pregnancies. If this is true, why is it continuing to happen? Why is it being allowed, even encouraged?

Jim Fetzer, a former Marine Corps officer, is McKnight Professor Emeritus at the University of Minnesota—Duluth and editor of *Veterans Today*. He conducted one of the most disturbing radio interviews of his life as host of "The Real Deal." He interviewed Barrie Trower, a British physicist and Royal Navy microwave weapons and electronic warfare expert. Fetzer recorded his interview with Trower in an article titled, "WiFi: An Invisible Threat to the Species."

By the time Barrie had finished his service in the military, he had acquired a great deal of expertise in the microwave field and he extended his research to common electronic systems, including cell phones, iPods, computer games and microwave ovens.

He was appalled to discover that microwave radiation is ever-present and extremely hazardous, especially to pregnant women and young children. The risks are so great that the use of WiFi, which is enormously popular, can lead to permanent genetic damage to your children and your children's children. Here is his personal warning in his own words—an expert who knows what he is talking about:

In the very early 1960s, I trained with the government microwave warfare establishment. I looked at all aspects of microwave warfare and when I finished my time in the military, because I had a lot of expertise in the microwave field, I was asked if I would carry on with this research. We are in a new Cold War and this is why countries are developing this. And this is why all the microwave transmitters [cell towers] are going up everywhere because somebody, if they wanted to, could use them for other effects. The system is up and running.

Years ago our government (of the UK) said to our scientists when it comes to microwaves, you will only talk about things to do with heat, and that is it. So they won't even discuss anything else. They will deny anything that doesn't have anything to do with heat. They even deny all their 40 years of research leading up to this, although they've said that this can cause cancer and all the damage, they say no it can't. We're only looking at heat and heat is all that matters. So for the last 40 years, the English government has been lying to the people. And the American, the Canadian, the Australian [governments], they have been lying. They have been lying to protect industry, to protect their profits, to protect themselves from lawsuits.

So they are really just liars and it is provable, sanctioned by the World Health Organization, without a shadow of a doubt. It is the

same people that sit on the ICNAP certificate, sit on our government health protection agencies, sit on the World Health Organization it is the same people.

There are probably no more than 20 of them. But, yes, they are going to, in my opinion, commit the worst genocide this planet has ever known, not just people, but animals and plants. They are probably going to cause more destruction than a global war, and in several hundred years time, people will look back—whoever survives—and look at what we tried to do to stop them.

He was really shaken up by what he had discovered and what his research brought to him and what he saw the industry doing.

Those most powerfully affected are pregnant women, children, women generally, the elderly, men, and (least of all) the physically fit. Some persons appear to be invulnerable to exposure, but a significant percentage—from 47.7% to 57.7%—appear to be especially vulnerable, even from what most of us might have regarded as low doses that represent minimal risk. The situation, however, turns out to be quite the opposite.

The human female is born with 400,000 follicles, of which approximately 400 will eventually mature into eggs with the potential to be fertilized by sperm to produce a zygote, which will develop into an embryo and then into a fetus and, under favorable conditions, will result in a live birth. During the first 4-6 weeks of a woman's pregnancy, the embryo is most vulnerable, especially because the woman may be unaware that she is pregnant and take no precautions.

Here is a simple explanation of the deterioration caused by WiFi:

Imagine you are a girl, five years old, in school and sitting with a WiFi laptop near your abdomen.

Theoretically, your ovaries can become irradiated until you leave school at age 16-18 years old. When you become pregnant, everyone of your follicles (some to become eggs) will have been microwaved. Hence, you may or may not deliver a healthy child.

Should you become pregnant as a student, your embryo (for its first 100 days - if it is female) is producing approximately 400,000 follicles (within its ovaries) for future child-birth.

The problem is that these developing follicle cells don't have the cellular protection of mature adult cells. Consequently, your 'grandchild' may have had every single follicle cell irradiated and damaged prior to conception. Therefore when your child becomes an adult (with its irradiated follicles) there is a greater likelihood of its child (your granddaughter) suffering the ailments mentioned, during conception, embryonic and fetal development stages.

As Trower explained, because the brain tissue and bone marrow of children have different electrical conductivity properties than do adults, a child's absorption of microwave radiation can be ten times higher than an adult's.

Even low frequency exposure to microwave radiation can be extremely damaging and induce oxidative and nitrosative forms of stress, which can cause irreversible genetic damage that will be manifest in miscarriages, still-borns and birth defects.

The effects are cumulative across generations, where studies by the WHO have established that women exposed to low level dosage of microwave irradiation (below thermal level, where it is felt as heat) had a 47.7% rate of miscarriages prior to the 7th week of gestation.

The level of exposure in this case was below what most school girls will receive in a classroom of WiFi transmitters from the age of approximately five years upward, whose effects can include cancer, memory loss and birth defects.

These effects are transmitted to each successive female generation and, whether these ten-fold increases merge to become 57.7% or are additional and thus equal to 67.7% doesn't make a significant difference. The consequence is to roughly halve the birth of normal children with each generation, which represents a catastrophe-in-the-making for humanity.

The prospects for remedying this situation are bleak because (1) the American public is scientifically illiterate, (2) we love the convenience of cell phones, iPods, and other electronic devices and (3) the corporations that produce them are going to do everything in their power to maintain their profit margins.

Imagine 57.7% of all of the schoolgirls with WiFi in their classrooms all day - all year - all through their school career, in every country in the world using it! In just two generations we could have more dead/sick infants than resulted from both World Wars. And these figures come from government advisors and research.

Not the least disconcerting aspect of this situation is that, not only was all of this known and documented long before WiFi was ever put in front of children, but the dangerous biological effects were concealed (as they are to this day) from the general public, in order to protect the industry's profits.

British novelist Dresden James is credited with this insight into human reasoning:

A truth's initial commotion is directly proportional to how deeply the lie was believed. It wasn't the world being round that agitated people, but that the world wasn't flat. When a well-packaged web of lies has been sold to the masses over generations, the truth will seem utterly preposterous and its speaker a raving lunatic.

The World Health Organization's 'International Symposium' Research Agreement No. 05-609-04 'Biological Effects and Health Hazards of Microwave Radiation' emphasizes in its 350 pages: that there are biological effects, health and excess mortality from artificial irradiation of Radio Frequency Microwaves. Section 28 deals with problems concerning reproductive function. This document was classed as 'Top Secret' and its contents withheld by the WHO and ICNIRP (International Commission on Non-Ionizing Radiation Protection). What a sad state.

God inspired the prophet Jeremiah to predict one of the effects on an Israelitish nation when it flagrantly disobeys God's laws. As its people sin continuously, this is how they treat one another:

Jeremiah 9:5 Everyone will deceive his neighbor, and will not speak the truth; they have taught their tongue to speak lies; they weary themselves to commit iniquity.

What the human governments and industries are doing to our children and our children's children is truly evil. I leave you with this thought and question:

Have you made a god out of your WiFi device? Is your cell phone, iPod, iPad, or computer game more important to you than God Himself? If so, it may become the death of you, your children and your children's children. Buyer beware; you have been lied to!
